As a former Law Enforcement Officer, I know how important it is to keep emergency gear, weapons, and supplies normally stored in your Police Car trunks dry at all times. To prove that Dri-It performs well in, I placed a hygrometer in one car WITHOUT Dri-It, and a hygrometer in another WITH Dri-It (2 pouches) per trunk.

The trunk **WITH Dri-It** stabilized (with trunk lid closed) at around 30%RH ~ for up to 3 months before the pouches filled up and needed to be replaced.

The trunk **WITHOUT Dri-It** varied, with RH ranging as high as *90%RH, down to a low of 50%RH.

*Corrosion/Rust begins at 45%RH, Mold starts forming at 60%RH.

These results mean that trunks with Dri-It will keep things dry so flares don't become too damp to work; stored ammo stays dry; weapons don't rust; etc. It also works the same way in the passenger compartment of Police Cars and SUV's. Someone in a Command Capacity who carries a lot of gear might appreciate the fact that dampness won't be a problem with his gear.
